

Amendments to the Claims:

The listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (currently amended) A foundry binder system, which will cure cures in the presence of sulfur dioxide and a free radical initiator, comprising:

- (a) 20 to 70 parts by weight of an epoxy resin;
- (b) 1 to 50 parts by weight of an acrylate;
- (c) 1 to 30 parts by weight of butyl tallate ~~an alkyl ester of a fatty acid wherein the alkyl group of the ester is an aliphatic hydrocarbon having from 4 to 8 carbon atoms;~~
and
- (d) from 10 to 25 parts by weight an effective amount of a peroxide,

wherein (a), (b), and (c) are separate components or mixed with another of said components, provided (b) is not mixed with (d), and where said parts by weight are based upon 100 parts by weight of binder.

2. (previously amended) The binder system of claim 1 wherein the epoxy resin comprises an epoxy resin derived from bisphenol A.
3. (currently amended) The binder system of claim 2 wherein the epoxy resin has an epoxide equivalent weight of about 165 to about 225 200 grams per equivalent.
4. (original) The binder system of claim 3 wherein the acrylate is a monomer.
5. (previously amended) The binder system of claim 4 wherein the acrylate is trimethylolpropane triacrylate and the peroxide is a hydroperoxide.
6. (original) The binder system of claim 5 wherein the hydroperoxide is cumene hydroperoxide.
7. (canceled) The binder system of claim 6 wherein the alkyl ester of a fatty acid is butyl tallate.
8. (presently amended) The foundry binder system of claim [7] 6 wherein the amount of epoxy resin is from 40 to 65 weight percent; the amount of multifunctional acrylate is from 5 to 30 weight percent; the amount of butyl tallate is from 5 to 25 weight percent; and the amount of free radical initiator is from 15 to 20 weight percent.
9. (original) A foundry mix comprising:
 - (a) a major amount of foundry aggregate;
 - (b) an effective bonding amount of the foundry binder system of claim 1, 2, 3, 4, 5, 6, [7,] or 8.
10. (original) A cold-box process for preparing a foundry shape comprising:
 - (a) introducing the foundry mix of claim 9 into a pattern; and
 - (b) curing with gaseous sulfur dioxide.

11. (original) A foundry shape prepared in accordance with claim 10.

12. (canceled)

13. (canceled)
